

SECURITY HEALTH CHECK

A confidential review of your network's vulnerability and risk. An easy to understand report of findings with recommendation that will help manage risk and protect your network.

THE TECHGARDENS DIFFERENCE

The purpose of the Security Health Check is to identify weaknesses before they can be exploited. Our security professionals take the proper steps so that risks are identified, understood, resolved or accepted as part of the information risk management lifecycle.

We can assist in the remediation of those findings by providing powerful data loss prevention protection, and encryption capabilities to help mitigate your risk of intrusion to your business.

SECURITY AT ITS BEST

Our security health check is based on many years of providing efficient and effective security, risk and compliance services to organizations around the world.

FIND & FIX METHODOLOGY

The purpose of a Security Health Check is to identify weaknesses before they can be exploited. Our security professionals take the proper steps so risks are identified, understood, resolved or accepted as part of the risk management lifecycle.

PLAN & OPTIMIZE

We'll use findings from our risk and vulnerability assessment to develop an actionable plan tailored to your organization's needs. Our plan will consider

your organization's current security posture, appetite for risk, potential regulatory and financial impact, IT environment and staff capabilities. We work with you to optimize your existing security and compliance processes and controls.

BUILD & DEPLOY

Let Techgardens become your trusted advisor for information security. Our security experts have the training and expertise to ensure the right solutions are designed, configured and deployed to solve your security challenges. Our goal is to help you manage your risk in this network centric world.

A PARTNER YOU CAN TRUST

We deliver a cybersecurity, risk management and compliance program that is as unique as your business. Our goal is to ensure that your organization develops cyber resilience.

OUR PROCESS

We conduct a high level review of your company's IT systems, its policies and procedures for maintaining the confidentiality, integrity and availability of its corporate data. We check all the components within your infrastructure including servers, firewalls, workstations, laptops, mobile devices, domain controllers, etc. We review logs in the last thirty days that can identify anomalies and suspicious activity.

After the assessment is done we produce a report that highlights vulnerabilities, misconfigurations, weak policies and make best practice recommendations of how they should be remediated. Findings are prioritized based on severity and classified from low risk to critical with a proposed schedule for implementation.

MANAGE & OPERATE

Techgardens is ready to assist you in managing your technology environment, information security devices and applications to meet your security objectives. This can be for the short term while you address pressing operational issues or for the long term since you do not want to divert scarce resources to manage systems that are not part of your core business competency.

RESPOND & EDUCATE

Our team will follow standard accepted procedures to identify, document, contain and remediate a security incident to minimize the impact to your organization. Effective security education programs can reduce the probability of an incident or reduce the organizational impact of an incident, should one occur. Our staff will work beside members of your team and increase their understanding of your security posture, security and compliance exceptions, and effectiveness of controls providing cost-effective solutions to your management.

WHAT'S INCLUDED

Our tested security assessment includes:

- Situation analysis
- Document review
- Risk identification
- Vulnerability scan
- Data Assessment
- Report and briefing

FINDINGS REPORT

At the completion of our assessment, you will receive a security report:

- Executive summary
- Overview of assessment
- Objectives
- Assumptions
- Synopsis of current environment
- Summary of findings
- Assessment results
- Recommendations

THE RESULTS

The Security Health Check should be a priority for any organization.

These assessments help to identify areas where potential breaches may occur and the results of the Security Health Check can save your company thousands of dollars in lawsuits for unnecessary breaches of security.
