

Why Choose iXsystems?

OPEN SOURCE DNA

If your company leverages Open Source technology, it's a distinct advantage to work with a company that speaks your language. Nearly everything we do at iXsystems involves and benefits Open Source technology. We incorporate Open Source solutions into our storage and server product lines, and use them extensively ourselves. We are the main developers of PC-BSD, FreeNAS, and TrueNAS and contribute to FreeBSD, OpenZFS, and Slackware Linux. We spread the Open Source message in print, radio, and video publications and through our participation in various industry events around the globe. Our CTO is Co-Founder of the FreeBSD Operating System, and we employ a long list of FreeBSD and Open Source project committers, all of whom came to iXsystems because of their passion for Open Source. It has allowed us to be successful, and in turn, allows us to help our clients do the same.

STORAGE BUILT FROM THE GROUND UP

At iXsystems, we develop and support the world's leading open source storage operating system, FreeNAS. We also understand the need for our enterprise clients to have a storage solution that combines stability, flexibility, and simplicity with high-performance hardware, professional support, and high availability clustering, for which we offer our TrueNAS enterprise storage arrays. With SAN and NAS in one appliance, TrueNAS is well suited for nearly every storage application, providing a reliable, fast, and easy-to-manage solution without being nickel and dimed with new licensing for every feature.

CUSTOM-DESIGNED ENTERPRISE SERVERS AND OPEN SOURCE EXPERTISE

There isn't another company that understands hardware and open source software like iXsystems. We work with our partners and supply channels to craft enterprise server solutions that provide a level of flexibility and personalized support rarely found in the enterprise server market, along with server hardware always qualified for your OS of choice. iXsystems utilizes a state-of-the-art manufacturing facility and strict quality control procedures at every step of the process, including exhaustive burn-in tests designed to ensure optimal reliability and performance once the systems are deployed. From there, our dedicated Support Technicians act as an extension of your team to keep your servers operating flawlessly throughout their lifetime and at any scale.

AN EXTENSION OF YOUR TEAM

It's never about "making a sale" for us — it's about building a lifelong partnership. For over two decades, iXsystems has provided rock-solid solutions built on an open source foundation for thousands of clients around the world. We take pride in our responsiveness to customer needs and work hard to build lasting partnerships, where iXsystems is seen as a trusted member of your team. We work to understand your business, operate with your interests in mind, and always seek creative ways to save you time and resources.

COMPANY HISTORY

Nestled in the heart of Silicon Valley, we have been committed to serving technology needs, with a focus on Open Source and enterprise hardware, since our beginning in 1996. From our inception onward, we've been perfecting our craft of making quality storage solutions and custom-built servers, and our dedication to a superior customer experience has been our guiding principle.
